Profile

Backend developer with 2+ years building scalable payment systems, APIs, and microservices on multi-tenant, high-availability platforms. Available for freelance and contract work — I help teams ship reliable, production-ready backends fast. Strong record integrating payment gateways, building event-driven schedulers, optimizing databases, and resolving complex production issues. Clear communicator, deadline-driven, and comfortable owning a project end to end.

Technical Skills

Languages: JavaScript, TypeScript, SQL

Backend: Node.js, Express.js, NestJS, REST APIs, Microservices, Event-Driven Design

Databases: PostgreSQL, MongoDB, MySQL, Redis

Cloud / DevOps: Google Cloud, Docker, CI/CD, Linux, RabbitMQ

Tools: Git, GitHub, Postman, JIRA, BigQuery

Concepts: System Design, OOP, TDD, Distributed Systems, Caching, Monitoring

Experience

Software Developer (Backend)

Oct 2023 – Present

Jio Platforms Limited — Hyderabad, India

- Built and maintained recurring-payment and autodebit (mandate) services on a multi-tenant NestJS platform, integrating the payment gateway for server-to-server debits with robust retry and error-code handling.
- Designed RabbitMQ-driven scheduled consumers (billing, renewals, accounting, deactivation) processing 10,000+ jobs daily with retry logic, per-tenant fan-out, and structured error tracking.
- Implemented invoice, purchase-order, and payment-receipt flows with accurate accounting-entry generation across partial and full payment scenarios.
- Built a real-time payment insights dashboard using MongoDB aggregation for 500+ active users.
- Improved MongoDB performance through schema redesign and indexing — 60% faster queries.
- Added Redis caching (including scheduled cache-refresh jobs), reducing database load by 40% and improving response times.
- Automated billing and invoicing workflows, cutting manual effort by 70%.
- Diagnosed and resolved production payment failures by tracing transaction lifecycles across gateway, consumer, and database layers; authored clear RCAs and PR documentation.

Selected Projects

Distributed E-Commerce Backend

NestJS, PostgreSQL, Redis, RabbitMQ, Docker

github.com/sunny1392/ecommerce-backend

- Architected a 5-service system (User, Product, Order, Payment, Notification) with event-driven communication, supporting 10,000+ concurrent users at 99.9% uptime.
- Implemented Redis caching that cut database queries by 65%; designed a PostgreSQL schema for 1M+ products with optimized indexing.
- Added JWT auth with RBAC, webhook-based payment flows, and real-time stock updates.

Education

B.Tech, Electronics & Communication Engineering

Birla Institute of Technology

2019 – 2023

GPA: 7.8/10

Highlights

- Solved 500+ DSA problems on LeetCode.
- High Performer Award and Highest Story-Point Achiever (Q4 2023, 40+ points) at Jio Platforms.
- Mentored 3+ junior developers and interns.
